# 501 RADS

or, the radioman's guide to the wasteland

# Introduction:

Hello new wastelander! Welcome to the most comprehensive guide to surviving and thriving in the nuclear wasteland that has become of earth! My name is Wacky Jack, and I am the author of this guide! I hope the information within will lead you to many safe adventures. Without further ado, let us break down the past, present, and future of this fine world!

# The history of our fine earth:

The irradiated hellscape you see around you today is the result of some very poor choices made by our forebearers. In order to understand the current situation of the wasteland, we must first understand its origin! The best place to start must surely be the year of our lord 1945, when “Little Boy” and “Fat Man” took the lives

of 200,000 people. Since then, generals and politicians alike just could not quit sending nuclear bombs to places they don't belong! Not long after, in the year 1968 another unfortunate nuclear incident occurred in Vietnam. Not long after what would be known as the "My Lai Massacre", where American soldiers massacred a Vietnamese village, a Vietnamese spy and former victim of MK Ultra would smuggle a nuclear weapon into Saigon and end the Vietnam War early. This nuclear detonation broke a 23 year span of nuclear peace, a peace which sadly would never be found again. America immediately blamed the Soviet Union for the detonation, leading to the then most tense moment of the Cold War. Though the world did not end that day, many agree that the destruction of Saigon set off a chain of events that would lead to the world you see today.

That would not be all that happened. Not long after in 1972 the terrorist faction Black September would take Israeli hostages at the

Munich Olympics, leading to multiple deaths and an increase in hostilities in the middle east. Shortly after, an Israeli spy was arrested in Cairo, seemingly with the intention to assassinate the leader of Egypt, Anwar Sadat. With this crucial arrest, there were no hopes of de-escalating the tensions in the middle east. Tensions in the region would grow, and by 1978 a war would break out, with western powers fighting to defend Israel against its Arab neighbors. The Soviet Union saw an opportunity to weaken western morale and hegemony, and funded and supplied Arab nations in their assault, leading to a sustained war in the late 70's and 80's known as the First Sinai War. Some eastern Arab states would eventually join the Soviet Union, including Afghanistan and much later, Iran. The first Sinai War only ended in 1986 when the Chernobyl Disaster greatly weakened the Soviet Union. Despite the best efforts of the USSR, a great amount of radiation entered the groundwater and later the Pripyat River, which eventually feeds into the Dnieper. This led to a

Europe spanning health crisis where an estimated 20 Million died, from both Soviet Bloc and Western Nations. It was at this time that the Soviet Union committed extensive resources to developing secret weapons and treatment in the Chernobyl zone, making attempts to both immunize their people against the dangers of radiation, and to use it more effectively as a weapon against their enemies. The great crisis that killed so many would come to be known as the “Green Death”. This event would lead to considerable rises in European Anti-Soviet sentiment, leading to a Ukrainian politician assassinating Gorbachev during a press meeting. Though many were glad to hear of the death of the Soviet leader, his replacement was far worse. Boris Lyapunov took office in 1987 and would lead the USSR for many years. Lyapunov sought to relight nationalist pride in the USSR and strengthen its morale, and so Lyapunov arranged the third and final nuclear exchange of the pre-apocalyptic globe. Via propaganda and targeted assassinations, the KGB raised tensions

in the Middle East once again, inciting a nuclear exchange between India and Pakistan, as well as an Iranian nuclear bombing of Tel Aviv. While this surely seemed to be the beginning of the end, Lyapunov did not wish to end the world, he merely wished to distract the globe while his nation regained its power. The United States did not strike first, and so neither did the USSR. The death toll from the exchange in southern Asia was immense, and the ensuing Indo-Pakistan War would all but wipe out both sides. Meanwhile, the Second Sinai War began, with a retaliatory invasion of Egypt, Iraq, and Iran by NATO forces. While many suspected it, it was not yet confirmed that the USSR was behind the bombing, so all effort was focused on seizing Tehran and any more nuclear weapons held there.

Meanwhile, the USSR regained its strength, and though some estimates said it may fall by 1991, the nation reached a new peak, both in technological prowess and nationalistic pride. Lyapunov's investment paid off, and he was able

to sell weapons to the Iranians who had become more wealthy under Soviet control, earning needed money for the mainland and draining the already weakened west of its resources. By 1994 Tehran was taken, but this was of no concern to the USSR. They had successfully recovered from the 1986 Chernobyl disaster and reached a new peak of prowess. Around this time the Chinese were coming to power as well, seeking to rival their neighbor Russia as a great Communist state. Despite their shared ideology, the two nations held some hatred for one another. China began to brutally conquer and annex much of Asia during the Indo-Pakistan war, as its only major regional competitor, India, was decimated by the conflict. First, China annexed the Koreas, and despite their pleas, American intervention in the Koreas never came. Japan followed soon after, and though they put up a fight, overwhelming Chinese numbers overcame the island nation. Not long after, the Chinese swept through the rest of Asia and controlled everything from Jakarta to Beijing. India and

Pakistan would continue to fight to the last man, and when the dust had settled China would claim what little shred of civilization was left there.

The year is now 1995, and The USSR and CCP have reached new heights of global dominance as the west reels from war. The United States, feeling the pressure placed upon them by the eastern nations, begins to expand in turn. The USA would first annex Mexico, who willingly became part of the USA. The USA began a rapid and brutal criminal cleansing of Mexico, oftentimes resulting in huge collateral losses, rapidly losing the trust of the Mexican people. Shortly after, in 1996, the USA would invade Canada, and in three months would force the nation to be subject to American rule. In September of that year the Quebec Massacre saw the deaths of 130 protestors after an experimental crowd control weapon, one of the early Laser weapons, caused much more harm than intended. The USA was now struggling to maintain its control over the two

nations it had recently taken over, and the globe had reached levels of tension never seen before. Around this time, western Europe saw a second catastrophe when the Civaux Nuclear Power Plant had a massive failure, resulting in what many called a "Second Chernobyl". Civaux was positioned near much of France's fertile farmland, and so a great famine accompanied the disaster, leading to even more death in western Europe. With the West occupied, USA struggling for control, and the East expanding, the final steps towards destruction would commence. In 2001, Saudi Arabian terrorists would fly planes into the World Trade Center, claiming revenge for the destruction wrought during the Sinai Wars, namely the accidental bombing of a refugee camp. For the third time in a century, American troops were sent to the middle east to find and destroy the terrorists, but this time with no help from any other nation. This campaign was a disaster, only increasing the divide between eastern and western power. Around this time, the American government was hurting badly for money,

and a number of enterprising businesses fought for government contracts. The government became increasingly reliant on its new corporate backbone, and by 2008 was beginning to lose any hope of recovering. Three major corporations would rise to become household names. DynamoCo, Rothberg, and Nutrocorp. DynamoCo capitalized on new breakthroughs in Nuclear and Laser technology to become the forefront of energy and technology, and their lack of government regulation led to their products being both very fast to develop and rarely safe. Rothberg emerged at the top of the financial food chain, and would rapidly become the holder of almost all wealth in the nation, working closely with the other two corporate giants to maintain domination. Nutrocorp seized all the food and water production of the nation and became the arbiters of nutrition, pumping out inexpensive and unhealthy food en masse. These three corporations would steer the nation through the trying times of the 21st century.

In 2011, Canadian terrorists bombed the Statue of Liberty, leading to an even more oppressive regime being installed in Canada, attempting to beat the rebellion out of them. All the while the Eastern Nations now thrived, seeming more and more undefeatable. This unbridled progress in the east was riding on top of a terrible truth: the world was running out of oil. Part of how the east and west alike were able to grow despite the turmoil of the world was oil, and it was starting to run dry. Russia would begin to feel the scarcity first, as oil fields across the USSR began to run dry. Not long after, the USA's oil, supplied partly by its involvement in the middle east and by the Gulf of Mexico, also began to run dry. Following suit, China too began to see its oil start to vanish. For those high ups in the world it was clear to see that something would break soon. The world had survived three nuclear engagements, but only barely. What would happen once the lifeblood of the world stopped flowing? Nations raced to develop alternative solutions, but the more they

tried, the more oil seemed like the solution. If only each nation could have all the world's oil to themselves…

In 2017 a breakthrough in nuclear power would come in a Chinese lab, when scientists developed a stable, self contained, small sized nuclear energy cell, capable of powering a neighborhood for a year. Spies from the other two nations were rampant in China, as was the case for every nation in the world, and so shortly thereafter the USA and USSR would develop their own prototypes. The miracle technology seemed like it would save the world, but before long the world governments also realized its use in warfare. With these, armies could wage large scale war, but potentially avoid a nuclear exchange. If this didn't solve the oil crisis directly, then perhaps it could instead solve it indirectly. All three nations developed weapons of war, rather than using the technology to solve the energy problems. In the USSR, the nationalist rhetoric was that war was

inevitable, and that the USSR must be strong and ready. In China, the sentiment was much the same. The Chinese were furious that their breakthrough, their chance at an upper hand was stolen, and so they built weapons of their own. The USA, steered by DynamoCo's violent ambitions, developed weapons too, and the final nail in the coffin was hammered in. In 2021, World War Three officially began. China and the USSR immediately began fighting on their shared border, the new laser weaponry being used to terrifying effect. In 2022, a small, localized nuclear weapon was developed and deployed onto battlefields, acting as a bridge between conventional and nuclear explosives. China invaded Alaska not long after the start of the war, as Alaska was the sole remaining source of American Oil. Meanwhile in Europe the last bastions of western power fell as the USSR fought to take the whole continent.

In 2025, all hell broke loose. The USA realized that they had fallen behind. During the late 90s

and 2000s, they had finally failed to keep pace with the east. The Rothberg banks were beginning to run low on money, and the nation had to ration electricity in order to save what little energy they had left. In China, an internal Capitalist rebellion against the harsh rule of the CCP led to governmental instability, and in the USSR the assasination of Boris Lyapunov caused a collapse of the power structure. To this day it is unknown who launched the first strike, but on Christmas Eve, 2026, the world underwent a full nuclear exchange. Moscow, Beijing, and DC were decimated, just like every other site of importance anywhere on earth. And just like that, the world as we knew it ended. Today, Christmas is not much of a holiday, and everyone refers to that day as “Christmas Eve”.

# The USA, Today!

Fuck all that gloomy bullshit though! The one good thing that came of all this is true

American freedom, like the founding fathers intended! You don't care about any of that boring history, you care about right here and right now! So, let's talk about the fine folks and weird radioactive quirks that shape our world today!

# The Radiomen

Considering you are reading this fine guide then I suppose you have heard of my guild, the Radiomen. We are a collection of sensible folk who communicate over a network of nationwide radio antennae, which is partly how I have amassed so much knowledge! Radiomen across the wasteland are committed to bringing some common sense to the world, by any means possible. We radiomen like to broadcast any news we can, giving reports on local events, playing music, or chatting with other radiomen. Unlike many other factions, we are a rather loose knit bunch, but fiercely loyal nonetheless. If you are

ever in danger, find a radio and maybe there will be a radioman on the other end to help you out! We radiomen have developed a number of secret communication tricks to stay in the know with one another. Most importantly, we always sign off with “Over” or “Over and Out.” While it may seem corny, it helps us know when we are talking to a true radioman, or some devilish imposter. Additionally, we use the word “indubitably” to indicate that whatever we are about to say is the opposite of the truth, and some other neat tricks I’ll have to teach you sometime. I can’t put them all in here or my secrets are toast!

# Raiders and their offshoots...

The greatest scum in the wasteland are the raiders. These are the antithesis of the Radiomen. Raiders are a catchall term for the many disparate groups of roving murderers who

prey upon the good men and women of our fine nation. Raiders in general use brutality and scare tactics to bully people into submission, but are more often than not poorly organized, cowardly, and easy to avoid or scare off. This is not true of some of the larger and more organized raider bands, detailed below.

## The MP (military police)

The MP are a large and well organized raider band consisting of many, you guessed it, former military personnel. While many American soldiers died in the events surrounding Christmas Eve, either directly in the war or in the aftermath, some remained. Some of the more violent and opportunistic veterans would form their own raider band, which they call the Military Police. Their own internal rhetoric preaches that the only way to bring order to the wasteland is through extreme violence, which the faction seems to revere as gospel. The faction is known for its pseudo-militaristic regime, with ‘ranks’ and a coherent power structure. The

MP is largely decentralized today, with no true leader or central leadership. Rather, individual chapters will have a General, who serves as a regional leader. Generally, chapters of the MP do not interact much, but when they do they have been known to cooperate. In regions with a large MP presence, the group has been known to enforce protection tax, tolls on well traveled roads, and carry out executions and other mob justice. They are also known to have underlying attachments to pre-war white supremacist racist groups, such as The Base. The modern MP hates mutants of all varieties, and more extreme chapters are known to execute anyone with visible mutation on sight.

## Junkie Crews

Another vile subsection of the greater raider issue is the Junkie Crews, a loose term for groups of raiders with a specific drive to fuel crippling addictions. The Nutrocorp regime of the late pre-war era had set up a

pharmacological empire based upon addicting civilians to drugs. Unlike some of the more obviously harmful drugs of the late 20th century, Nutrocorp took immense care to brand their products as healthy and useful, and also to ensure their products have few to no visible side effects. This insidious model of business left a generation addicted to drugs they didn't even know they were addicted to. People in the post-war era have more or less figured out that these drugs are harmful, but for many it is too late. Junkie Crews will murder for their drugs, and with Nutrocorp no longer mass producing the drugs, they take to manufacturing their own. Nutrocorp is known to hire, enslave, or train people to cook and manufacture their drugs for them, and some particular organizations have even taken over and restored functionality to medical centers or pharma production centers. They do not do this out of the kindness of their heart, and have been known to play the same game as Nutrocorp, getting wastelanders addicted to their product. These operations have also been

known to operate side hustles, including farming human beings and even babies for organs.

For more details on the many drugs fueling the wasteland, see the dedicated section for drugs.

## Tech Cults

Some raiders have attempted to gain supremacy in the form of technological advancement. Noble, no? Tech Cults take on two major forms, the religious and non-religious. The former consists of those who, to varying extents, lack understanding of their technology to a great enough extent to worship it. Many of these groups are headed by charismatic leaders who know full well that there is no god behind the machine, but spreading the idea to their supporters brings them immense power. Many of the cultists of this variety of tech cult were born post-war, and know no better about what they are seeing. The non-religious cults are no better, as they murder and pillage all the same,

technology serving as a stand in for true courage or power.

Tech Cults love military sites, as they often contain the cutting edge tech they seek. Tech cults have been known to train trusted members in surprisingly advanced tech skills, and some are incredible hackers.

## The Sea-Raiders

There is a group of raiders on the east coast of America famous for their large Flotilla cities and their affinity for murdering and robbing people up and down the east coast. They are most prominent in the Northeast, and will use the waterways of the coast, as well as the ocean, to travel a large area of the nation, stealing from as many people as they can. They are rumored to have a capital city floating out in the ocean somewhere. They embrace traditional pirate stereotypes, and like to fancy themselves as post nuclear swashbucklers.

# The Dosers

The Dosers are without a doubt the most insane of the raider clans. The Dosers have literally become addicted to radiation. The majority of Dosers were regular raiders who survived encounters with extreme radiation and were exiled from their former community. These groups are full of the most horrifically mutated humans who still draw breath, and Dosers have developed a sort of Stockholm Syndrome, where many of them will regularly expose themselves to extreme rads to try to bring about benign mutation. Many of them die very shortly after becoming inducted into the group.

Dosers are also known to kidnap normal people, which they derogatorily refer to as “smoothskins” or “the unenlightened”, and force them to absorb high amounts of radiation. The dosers see this as an act of kindness, as they will either die and be freed from this world, or

ascend to a level of divine mutation. Dosers are to be avoided at all costs, for those who wish to stay sane (or alive).

## Caravaners/Nomads

While most raider bands like to choose a small region to try to dominate, other packs operate like nomads, wandering around and pillaging regions in a quick strike before disappearing from the area. To the nomads, this has benefits, as they never stick around long enough to be hunted down.

The Caravaners are a well organized nomad clan who are known to transport and traffic goods for anyone with money. They are as reliable as you pay them to be, and are known to reliably deliver for individuals who pay upfront and often. They are still brutal, but unlike many other factions, they at least provide a scrap of value to the rest of us. Caravaners are both respected, feared, and targeted for their cargo

carrying abilities. If you want to ambush and rob a group of Caravaners, you best not miss.

# Other militant groups

In addition to the many raider groups, some less useless groups exist. While these groups are still violent and dangerous, some of them are respectable and don't prey on innocents.

## The Patriots

The patriots are the noble counterpart of the MP, and preach many of the same ideals, but with far less of the private executions. The patriots are also comprised of many ex-military types, but are generally less interested in domination and more interested in keeping everyone alive. While corruption within The Patriots is not unheard of, the group is largely respected by most and is known to defend major settlements in exchange for the respect and support of the

locals. Also unlike the MP, the Patriots are a centralized group, and are known to send reinforcements to areas that request assistance. Like their name suggests, the Patriots are headquartered in Massachusetts, and use Gillette Stadium, the home of the New England Patriots, as their base of operations. The Patriots frequently use Radiomen to transmit messages across our secure channels, which we do happily.

## The Domain of Iron (DOI)

The DOI is a post-American military group with mixed reviews. The DOI is incredibly well equipped, and their blurry past raises many suspicions about their origin. The group seems to be headquartered at a series of Oil Rigs in the Gulf of Mexico, and operates a small fleet of naval vessels in those waters. They also control a large amount of land and air vehicles, which generally make up the bulk of their power and strategy. The DOI seem to be few in number, but still powerful via their equipment. They have

been known to exhibit supremacist ideals, using enigmatic and specific exams to determine a human's "Use Factor", a statistic that was popular under the Rothberg corporate template in the pre-war era to determine the inherent usefulness of a person. In the pre-war era, a high UF could earn you better positions in life, though many of the day claimed the statistic was largely made up and was fabricated by those at the top to maintain power. The DOI now uses this in their own modified way to divide people into three categories. The highest bracket is those who they see fit to join their ranks, which they will often recruit. Below that, is the average man, who is nothing special but still acceptable to them. These people are never permitted to join or serve in any capacity, but will be allowed to go about their day. The lowest bracket is the 'nonhuman', who are best fit for slavery or death. Because of this system, many hate the DOI (reasonably so), but they have been known to come to the aid of innocents on many occasions. Rumors have it that after defeating

some group (often raiders), the surviving enemy force is forced to take their exams, and any who score high enough are recruited anyways. If this is to be believed, then many DOI soldiers may well be former raiders.

The formation of the DOI is murky, and many have theorized that the DOI might predate the war, and were perhaps formed before the war to provide a sort of new power to the elites of the military and corporations to seize new power in the post-war era once the inevitability of nuclear war became apparent to the elite class. These theories would explain the large resource pool and seemingly serendipitous territory the DOI controls. Their loyalties are to themselves and themselves only, so try to stay out of their way.

The DOI is known to operate mostly in the American south.

## The Cybernet

A mysterious organization (which may or may not even be real) known as the Cybernet is said to operate nationwide. The group reportedly lives in underground labs, and kidnaps and replaces people with robotic replicas, and then spies on people through the robots.

Little is known about them, and any talk of them is in whispered rumors. If they are even real, they are very secretive.

## Firewatch / Ski Patrol

Firewatch, and its sister faction Ski Patrol both operate in the mountainous regions of the United States. Firewatch operates largely in Appalachia, and Ski Patrol largely in the Rocky Mountains. Since the devastation brought on by the war caused a nuclear winter, the whole world got a lot colder, including the mountains. As such, the Appalachians and Rockies are snow

covered year round. The environment in these places is very rough, and so few live there. Those who do have the benefit of being relatively safe from raiders, as the raiders cannot sustain anything there, but suffer from the general inhospitality of the region. Firewatch and Ski Patrol have no formal connection but operate very similarly. Both provide protection and organization to the communities of the mountainous regions. If you can survive and make it to these communities, and go there with good intentions, these mountain settlements can be a safe haven.

## The Cartel

The cartel is a shady group that operates out of Southern Florida, specifically what remains of Miami. After the annexation of Mexico and the Caribbean, many Cubans and Mexicans moved to Miami and the already Hispanic influenced south of Florida. Post-war, this community coalesced into ‘The Cartel’ which is to some extent a

misnomer. The group does produce drugs, but unlike the cartels of the past is relatively nonviolent, and mostly produces useful drugs like radiation medication and similar.

The Cartel owns lots of valuable property, and is fiercely territorial over it. While the Cartel Communities get along well with each other, they are hostile to outsiders for the most part.

## Voodoo Mafia

The Voodoo Mafia is a gang somewhere between raiders and vigilantes. The group operates out of the Bayou country in and around Louisiana, and is known to hunt down Raiders and all the other crazy horseshit that goes down in the Bayou. They are also known to conduct crazy rituals involving human sacrifice and have been accused of just about anything reprehensible you can imagine. The group is famously hard to join or even find for that matter, as they value a sense of secrecy and surprise. They clearly are quite powerful, as their control over the Bayou

recently led to the major routes through the region becoming safe again, but no one fully understands how. More information about the Bayou can be found in its own section later.

## The Harlem Communities

The Harlem Communities are groups of surviving New Yorkers who converted the gang culture of pre-war New York into a post-war community of tenuous stability. The community lives in the decimated ruins of the Big Apple, and maintains much of the culture it had before the war. There are gangs, such as the Bloods and Crips, who fight over everything, just like they used to. Only now, there is no law enforcement, and the city is in shambles. New York is a hell hole, and these folk are somehow the most civil people there. When they aren't actively in a turf war, these people are quite nice and tight knit within their own gangs.

# The Monumentals

In the ruins of Washington DC live a very strange and violent group of cultists called the Monumentals. Though few survive encounters with them, reports indicate that the Monumentals in some way ‘worship’ the Washington Monument, claiming that it is a source of great power and deserves great respect. Suspicions around why the Monumentals act the way they do are unclear. Some theorize that they are another example of a charismatic leader abusing a large group of people. Others believe in a pre-war conspiracy theory that says that a government project under MK-Ultra installed mind control tech inside the Washington Monument and other notable buildings or monuments around the country to experiment on the masses with. Neither idea sounds very realistic.

The Monumentals are very well equipped, well organized, and seem to be universally enthralled by the Monument and its promises. Steer clear of

this faction at all costs, as they are typically hostile on sight.

## The Evolved

In the final days of World War 3 the USSR developed a bio-weapon called Radiovirus Omicron, commonly called RVO. RVO is a highly modified version of the common cold produced by developing a virus that is very resistant to radiation, and then irradiating the virus. The virus then infects a host, and as well as causing normal cold symptoms, exposes the infected person's DNA to the radioactive viral DNA. In most cases, this kills the victim, but in some rare cases the modified RNA of the virus, combined with the radioactivity, can lead to a rapid 'evolution' of the infected. Radioactive RNA and DNA from the virus replace the host's, resulting in a strange twisting of the human form. Survivors of RVO are called 'The Evolved', as they have taken on some extreme changes to their biology as a result of the RVO. Further

examples of the common types of Evolved can be found in their own section later on. The evolved are often outcast from society, and develop a supremacist identity, thinking themselves a better, stronger version of humanity. They form insular communities where they kidnap humans to use as slaves, or as food.

## Wireminds

Wireminds are independent, autonomous, sometimes sentient helper robots that have since gone rogue due to radiation disrupting their central processing. They roam in packs, have a general hatred for their human overlords, take human slaves, and are very resistant to damage. In a few communities, Wireminds have learned to create new generations of robots using factories. In other places, they are unable to reproduce, and thus are insular and avoid conflict.

# Governmental Organizations

Many regions have had governments or something similar attempt to resettle and revive communities across America. Below is a list of both successful and unsuccessful attempts at forming local governments.

## The Olympic Commonwealth

In the pacific northwest, communities from Oregon and Washington have formed a strong and safe community, free from many of the issues of the rest of the country. The region is cold and wet, and isn't completely free from raiders, but is generally well policed, and has recently begun collecting tax, holding elections, and started forging the path back to sane civilization. Seattle was leveled in the war, so Portland is the capital of the region. As far as we know,

there is no place on earth more civilized than The OC today.

The OC is experiencing some growing pains, however, and the bigger the communities get, the more effort will need to be put to maintain order. If there is any hope for America, it lies in the OC.

## The State of Jefferson

Literal days after the bombs fell, groups of right wing Californians from the north of California saw their opportunity to create the state they had long desired. Since the 1940s Californians had wanted to form a state in the north of California, which they would call Jefferson. They formed it, and it lasted a whole 3 years before internal struggle and external pressure collapsed the loose confederation of communities. That region is now home to a number of raiders, small redneck gangs, and all manner of horseshit.

# The Los Angeles Republic

In the former city of Los Angeles and the surrounding region of southern California and parts of Nevada lies the shattered and fragmented Los Angeles Republic. Founded in 2029, the LAR sought to establish a new civilization in the American southwest. By some standards, the LAR is the most successful settlement of all time, but cracks threaten to doom the republic.

The LAR has, much like the United States before it, adopted a two party system. The official titles of the two parties are unimportant, as everyone today knows them as the California Party and the Nevada Party. The California Party has long been the dominant party, but in recent years the Nevada Party has gained notoriety for its promises of a better LAR. The biggest fronts of debate between the parties are the issues of mutants, dealing with raiders, and tax. The

California Party has been criticized for its lack of strong policy, with many thinking that the Party is too relaxed on crime, too welcoming of dangerous peoples, and does not enforce enough law over its people. This has led to the Nevada Party forming a populist identity, promising the expulsion of mutants, and the cleansing of the territory of crime. Opponents of the Nevada Party warn that the authoritarian suggestions compromise the founding principles of the LAR and that if the Nevada Party comes to power the LAR will transition to an authoritarian police state. In any case, the LAR is struggling, as years of indecision and infighting have allowed opportunistic raider bands to reap and pillage the relatively rich land. Furthermore, allegations of corruption have been levied at LAR Prime Minister Jose Manchado, some even claiming he is being paid by raider gangs to turn a blind eye to their violence.

The fate of the LAR hangs in the balance. With level heads and wise choices, the nation could become a great new civilization in the wasteland. With poor direction, it may be a forgotten footnote in the next few years.

## The New South

The New South isn't actually a government, but rather a style of living common in the American south. The New South has adopted a very wild western ideology, where people are generally expected to take care of themselves. Southerners will generally be weary of outsiders or unusual folk, but are quick to come to the aid of other reputable southerners. The New South has no government or true laws, but communities have been known to put together and fund local private law enforcement, often referring to them as sheriffs or rangers. The job of a New South is dangerous and risky, but carries respect and honor. In some ways, the sheriffs are 'lawful raiders', as much of their livelihood relies on

killing raiders and looting them. The only difference is that the sheriffs protect the innocent (or so they should).

The largest of the New South communities have small governments or city councils that rarely actually do anything. Dallas, New Orleans, Atlanta, and Houston are the best examples, as they all have somewhat substantial communities that rely on the understated promise of violence if anyone breaks the perceived law.

## The Mountain Towns

As previously detailed, the mountainous regions of the United States are home to a few major settlements that have chosen nature as their enemy instead of raiders. These towns often have city councils of elected leaders, a mayor, and a sheriff. The mountains of the United States are incredibly harsh; the nuclear war made the world's climate far more extreme. The mountains experience harsh blizzards year round, as well

as the same dreaded radstorms the rest of the world faces. Due to the relatively low number of high priority targets in the mountains of America, few nuclear weapons detonated in the mountains. There are two notable exceptions to this, those being the Cheyenne Mountain complex in Colorado Springs, and the Langston Targeting Array near Summersville, West Virginia. These sites were both crucial in the American nuclear program, and received heavy amounts of nuclear bombardment. Other than these sites, the mountains are relatively low in radiation. There are still a number of highly dangerous mutant animals that live in the area, such as the exceptionally dangerous radbears of the rocky mountains, and the wendigo of the Appalachians. These communities are rugged survivalists who rely heavily on well maintained, climate controlled greenhouses. Most labor of the community is centered around ensuring that the farming equipment is not damaged, as growing crops in the harsh snow is impossible without the right tools.

# The Toronto Raptors

The Toronto Raptors have a long and storied history. Originally, they were a professional basketball (an old American sport akin to polehole) team. When America annexed Canada, they made an effort to destroy all Canadian icons or culture in an attempt to assimilate the Canadian identity into America, and this included the breakdown of their sports teams. Later, a group of Canadian terrorists would begin calling themselves the Raptors, both as an homage to their old sports team, and as a symbol of power and culture. This group would go on to bomb the Statue of Liberty, making a statement about the destruction of liberty in America. When the bombs fell, the organization shifted into a Canadian nationalist group, based out of both Toronto and Quebec. The group is staunchly anti-American, promotes the learning of French instead of English as a language, and is now the primary government in southern Canada. Little

more about them is known by us Radiomen, as they are insular and refuse to speak to Americans.

# Creatures, Criminals, and Commoners:

The below section is a detailed compendium of the myriad different people you might meet and enemies you may face!

## Humans

Humans come in two varieties: good guy and bad guy. Here is a few examples of how to spot the difference:

Rule 1:
Good guys and bad guys alike carry weapons. Just because someone has a weapon, does not mean they are dangerous.

Rule 2:
Good guys rarely carry the trophies of dead victims on their person. If the person you are speaking to has human bones, teeth, skulls, etc. on their person, they are probably a bad guy.

Rule 3:
Bad guys are often addicted to drugs. Look for the tell tale signs, like yellowed teeth, skin, and eyes, as well as collapsed veins in the arms.

Rule 4:
Bad guys will frequently use hostages, slaves, and other forms of human suffering to their advantage. Look out for this!

Rule 5:
Trust your gut. Better that some random dies than you!

With these out of the way, we can talk about some common bad guy archetypes

## The Raider Capitan

Raider captains, as the name suggests, are the leaders of a group of raiders. More often than not they have some unique skill that elevates them to the position of captain, that skill most often being violence. Usually, killing the captain of a raider crew will temporarily scatter them, at least until a new captain makes himself known.

## The MP Sergeant

An MP sergeant, much like the raider captain, is a specialized MP raider who controls a 'battalion' of MP raiders. He is often a self-indulgent military cosplayer with delusions of grandeur and a god complex. They can often be seen barking orders at their soldiers.

## The Dealer

Junkie crews will often have one or multiple 'dealers', leaders who control the supply and

flow of drugs in the community. In some junkie crews, the dealers are basically worshipped as gods for their ability to supply drugs. Junkie crews are very protective of their dealers, and dealers take extensive measures to keep their recipes and stashes secret so as to not be replaceable. Control over a dealer is control over a large amount of junkies. Some dealers avoid using the drugs they control, others don't.

## The Tech Priest

The Tech Cults of the wasteland are always led by their Tech Priest. The non-religious tech cults are typically led by the person with the most technical knowledge about technology, which often makes them very dangerous people to mess with. The more religious tech cults are more often led by the most charismatic member of the cult, as opposed to the smartest or strongest. In either case, the tech cult looks to them for direction.

## The Mailman

The Caravaners often have one or multiple organizers who are known by many as the mailman of that group. They are often not one of the deliverers, but rather are in charge of taking contracts from people and organizing the movement of goods. Mailmen are often hard to buy or bribe, but have on some occasions been known to double cross clients. They rarely tell anyone their real name, and often go by pseudonyms. Mailmen might live in the wasteland as a hermit, or might live in a settlement in secret. They are hard to track down, but can be valuable allies.

## The Decoy

A famous and favorite tactic among criminals and raiders is the trusty decoy. The decoy, sometimes a raider in disguise and other times a slave or hostage, is placed in a public location to beg for help or act injured. If any kind souls happen by, the decoy lures them into vulnerability and then the nearby raiders ambush

the kind soul. Always be suspicious of “hurt” people who are completely alone in the middle of nowhere.

## Creatures

Creatures, unlike humans, have no rules. They are cruel survivalists. Since the bombs fell, almost all wildlife that didn't evolve died off, so expect to see lots of freaks and other crazy stuff.

### Danger Level 1

Below is a list of Danger Level 1 creatures documented in my database that might help you survive. This list doesn't contain every animal, just the useful or interesting ones. Feel free to radio me if you think anything needs to be added to the list!

- Rad Rabbits

    - Cute, Fluffy, Non-hostile. Smell like burnt skin. Their organs can be used to brew anti-rad concoctions
- Green Salamanders
    - Not to be confused with red salamanders, or the salamanders group of mercenaries
    - Glow bright green in the presence of radiation
- Three Eye Possums
    - Three eye possums have developed a third eye, and the ability to use all three eyes independently, like a chameleon
    - Like to steal valuables and hoard them in dens. Finding a possum den can lead to treasure
    - Hard to sneak up on or catch.
- Skulldeer
    - Skulldeer are a terrifying deer species who grow no skin. They look decayed and dead at all times, but due to having no skin have become very disease resistant.
    - Their liver can be used to make disease cures

- Ferrobeaver
    - Ferrobeaver are a beaver species who developed iron teeth and bones as a result of a genetic mutation
    - They gnaw on rubble and ruins to get iron to make dams. The dams made of iron are less effective at blocking streams.
    - Ferrobeavers make great pets, and can destroy robots effectively by chewing them apart.
- Radcoon
    - Not to be confused with the slur used by New Southerners for dosers.
    - Radcoons are irradiated raccoons, and the sworn rivals of three eyed possums. Radcoons can handle radioactive material without issue, and seem to heal wounds when in the presence of rads.
    - They can be followed to sources of radiation, or trained to steal radioactive materials.
- Armordillo

    - Armordillos are a modified species of armadillo which have developed hard calcium carbonate shells which are very heat and damage resistant
    - If hunted, the shells can be made to make fireproof armor
- Radpie
    - Radpie are a species of magpie which have developed near-perfect and very loud imitation skills. By playing sounds for them, you can train them to make the sound.

## Danger Level 2

Here is a list of danger level 2 creatures. These are creatures which can pose a serious threat to humans, but which have known weaknesses.

- Snake Coyotes
    - Snake Coyotes are an evolved species of coyote which are also venomous and have long fangs. Their venom can be extracted

    to create antivenom, or a potent toxin for offensive uses.
- Coyote Snakes
    - Coyote Snakes are an evolved rattlesnake species which has learned to hunt in packs and has a sort of short range hivemind
    - Have been known to combine into a single large team snake
- Murder Turkey
    - The Murder Turkey is an evolved, aggressive turkey which attacks anything it sees unprovoked
    - It has developed flight without needing to climb to a high place, and has learned to use its weight as a weapon
    - Apparently it's still delicious. A delicacy even.
- Tusker
    - Tuskers are incredibly big wild hogs. Almost elephant size, they are a huge threat close up, but are incredibly slow

    due to their size. They often wade in pools or lakes to cool off.
    - Their hides sell for thousands
- Moosemen
    - Moosemen are an evolved form of Moose that are now bipedal. Standing well over 10 feet tall, the moosemen do not appear to be fully intelligent, and thus should not be mistaken for humans
    - Prefer night time for some reason
- Superspiders
    - Superspiders, as the name implies, are large evolved spiders. Their webs make for great rope, but their bites make for fatal encounters.

## Danger Level 3

These creatures offer the greatest threat to human life in the wasteland, and travelers rarely survive to tell stories of them

- Bubblebear
    - The bubble bear is an evolved grizzly bear that has large bubble shaped bumps on its back, which occasionally burst to release psychoactive compounds that can cause hallucinations
    - The chemicals can be refined into brghhh, the wasteland's rarest and most prized drug. Sells for thousands.
- Spider Bear
    - The spider bear is another bear species that evolved 4 extra limbs. Self explanatory. Does not produce webs.
- Land Shark
    - Sharks which have evolved the ability to walk and breathe out of water for short periods. Only dangerous near water. Very strong bite force.

    - Soup can be made from their flesh.
- Crocigator
    - The Crocigator is a horrifying cross between an alligator and crocodile. It has two heads, one crocodile head and one alligator head. Do not get them mixed up, as the brain is in the alligator head and the crocodile head is full of its eggs, which sell for lots of money.
    - The best tip to tell which head is which is to wave raw salmon near it. Only the alligator head likes raw salmon. The crocodile head prefers halibut.
- Mindwolf
    - The mindwolf is a mutant wolf which has evolved a strong, mind disrupting magnetic field. Getting too close to a mindwolf causes hallucinations, vomiting, nausea, and sometimes temporary paralysis. The alpha is most dangerous.

## Danger Level 4

The following creatures are so remarkably dangerous they don't seem real.

- The Mothman (men?)
    - In the rocky mountains, reports of a large moth with massive glowing eyes has been reported picking up and eating moosemen, humans, and sometimes inanimate valuables.
    - Likes to visit libraries? Need to fact check this…
    - Unclear if there is only one, or multiple
    - Intelligence and sentience unknown
- Nightcrawlers
    - Nightcrawlers are large, frog-like creatures. They are entirely white, are only spotted at night, and are known to kill people by grabbing them with their long ass tongues.
    - They only have two legs, and no arms.
- Chupacabra
    - Unlike the chupacabra of myth, which is kinda small, the real life chupacabra is the size of an adult bear, but way faster and resembles something like a coyote
    - Eats everything whole. No matter what.

- Wendigo
    - Wendigo appear at a distance to be skulldeer, but they walk on two legs, and have incredibly long and slender limbs
    - Reports indicate that rather than killing humans, they will kidnap them and force them to starve to death, even going out of their way to provide water to humans so that they don't first die of thirst.
    - Demonstrated ability to cloak or otherwise go kinda invisible
- Flatwoods Monsters
    - Flatwoods Monsters look like little aliens, and for all we know, they might be.
    - Incredibly rare, though reports indicate they may have a primitive language, and the ability to give humans suicidal ideations.
    - Not physically very dangerous, but they will try to convince you to kill yourself.
- Thunderbirds

    - Thunderbirds appear to be massive evolved eagles with abilities similar to electric eels. They are capable of delivering electric shocks, and can even generate such a large charge that they can produce lightning between themselves and the ground
- Wooly Throatstabbers
    - Wooly Throatstabbers are six limbed bipedal monsters which have two special limbs with no fingers, instead having long stabbing talons. They are precise with their stabbings, and have killed several travelers.

# Skills:

Skills are a measure of specific tasks characters are proficient in.

| Skill | Ability Modifier |
| --- | --- |
| Acrobatics | Dexterity |
| Animal Handling | Wisdom |
| Hacking | Intelligence |
| Athletics | Strength |
| Deception | Charisma |
| History | Intelligence |
| Insight | Wisdom |
| Intimidation | Charisma |
| Investigation | Intelligence |

| | |
|---|---|
| Medicine | Wisdom |
| Nature | Intelligence |
| Perception | Wisdom |
| Performance | Charisma |
| Persuasion | Charisma |
| Religion | Intelligence |
| Sleight of Hand | Dexterity |
| Stealth | Dexterity |
| Survival | Wisdom |

# Feats

# Classes

## Basic Rules

In addition to the written class rules for each class, all classes share a few things:

Every time a character levels up, they gain +1 to any two stats they choose (or +2 to one stat).

On levels 3, 6, 9 and 12, they gain a Feat

Level 12 is the max level

## Gunslinger

The gunslinger is the wild, gun toting cowboy of the American wasteland. Quick, both in body and wit, the gunslinger relies on distraction, positioning, and wild antics to survive in the wasteland. Gunslingers specialize in pistols and grenades, as well as in charm and smooth talking.

Gunslingers are all about hot streaks. They always seem to get lucky, and their luck tends to last.

It is recommended that gunslingers focus stat points into Dex and Cha.

Primary Class Feature: Gunslingers gain access to “heat” points. Gunslingers can earn heat points towards their hot streak, and spend those points to use powerful abilities.

Gunslingers earn a heat point for any of the following, though dungeon masters can award extra points at will:
+1 For a successful Charisma check or save
+1 For a successful Dexterity check or save
+1 For landing a hit with a pistol weapon
+1 For landing a hit with a grenade (stacks)
+2 For killing an opponent with a pistol or grenade

As the character levels up, they increase their maximum heat, as well as unlock new abilities with that heat. Heat resets after a long rest.

Level 1: Level 1 gunslingers gain access to the first two heat abilities, and at level 1 have a max heat of 3.
Lucky strike; for -1 heat, the user can re-roll any check. They must take the new value.

Stroke of Genius; for -3 heat, the user can roll 3 dice instead of one for any check, and select

which dice they wish. (It's like double advantage!)

In addition, gunslingers get +1 to checks and damage rolls done with pistols.

Level 2: At level 2, gunslingers unlock the following

Fan the Hammer; For -2 heat points, the gunslinger can fire several times in short succession. The gunslinger's next attack with a pistol has its damage multiplied by 3, but the gunslinger must announce before that attack that this ability is being used. You can still miss!

Level 3: Max heat increases from 3 to 5, and the gunslinger unlocks the ability to wield two pistols at once. Both pistols may attack within the same action

Level 4: At level 4, the gunslinger unlocks the following:

Distraction: for -2 heat, the gunslinger can choose any target that a teammate has already done damage to since the gunslingers previous turn. That teammate has “distracted” this opponent. For the remainder of this turn, any checks made to harm the target have advantage, and attacks made with pistols are guaranteed to hit. The same target cannot be distracted more than once.

Pickpocket: for -2 heat, when outside or inside combat, the gunslinger can pickpocket any target. If the target is known to have something on their person, the gunslinger can grab it. Otherwise, they can grab something random from the target. The target rolls a D20 to detect the intrusion, and only is aware if they roll a perfect 20.

Level 5: at level 5, max heat increases to 7

Deadeye: for -5 heat, the gunslinger chooses any non-boss target. On the gunslinger's next turn, if both the gunslinger and the target are still alive, and the gunslinger has line of sight to the target, the gunslinger fires a deadly shot. It always kills the target. To activate deadeye, you cannot take any other action, nor can you move. Being moved by any means interrupts the effect, and the heat is not refunded.

Level 6: At level 6, the gunslinger unlocks the following

Shrouded attack: if the gunslinger is not detected by enemies, they gain advantage on checks to harm them

Fantastic Story: for -4 heat, the gunslinger can cobble together a nonsensical story. Despite how crazy it sounds, a portion of it is true. The part of it that is true is at the DM's discretion, but the effect is always helpful to the gunslinger. Gunslingers can tell fantastic

stories to distract, persuade, or intimidate their enemies.

Level 7: at level 7, max heat increases to 9, and the amount of heat added doubles whenever heat would be added. (i.e. +2 for successful checks, etc)

No one walks away: for -7 heat, the gunslinger pulls an excellent stunt. For any number of targets that the gunslinger can see, the gunslinger fires twice at them. There is no limit to the number of targets.

Level 8: at level 8, the following effects are added

Master Gambler: gunslingers have advantage on any check that involves the gambling of money or property

Old friend: for -5 heat, the gambler happens upon an old friend. The friend is helpful,

knowledgeable, and useful. They always have some favor they owe the gunslinger. The gunslinger has friends everywhere.

Level 9: At level 9, max heat becomes 11

Bending Bullets: The gunslinger can now hit targets in cover/they cannot see by accidentally ricocheting shots into them. Attempts to hit in this way incur a -3 to hit penalty.

Wild Plan: For -8 heat, the gunslinger can devise a wild plan. They alone have final say on that plan. As long as the steps of that plan are followed by the gunslinger and their teammates, any skill checks which follow the steps of the plan or advance the plan in some way have advantage.

Level 10: At level 10, the following abilities are gained

Super Deadeye: for -11 heat, any target,

including bosses, can be targeted. If a boss is targeted, the effect works the same as normal deadeye. If a non-boss target is chosen, the gunslinger does not have to wait a full turn, the target simply dies.

Level 11: At level 11, there is no longer a maximum heat value.

Unbelievable luck: For -10 heat, any non-plot item happens to be nearby. It might not be easy to get, but it will be there. It's almost like you wished it into existence

Level 12: At level 12, the amount of heat added triples whenever heat would be added. (i.e. +3 for successful checks, etc)

Divine Intervention: for -15 heat the gunslinger can wish for just about anything and somehow it happens. The ultimate stroke of luck. Each time this ability is used, the probability that an unintended consequence occurs increases.

# Mutations

Mutations are a core (and wacky) part of the wasteland. For years now radioactive particles have been turning fish green and causing elk to grow seven heads. It just might happen to you!

Positive mutations occur when players make smart, lore building decisions, accomplish major milestones, or purchase treatments at rad doctors.

Negative mutations occur in place of death: If a character death would occur, the player receives a negative mutation as their irradiated body stitches itself back together.

## THE GOOD NEWS!

Not all mutations are bad! Some are actually surprisingly helpful…

Congratulations, wastelander! Your body has decided to improve itself without consulting you, your doctor, or the laws of nature! The following mutations have been observed to produce generally beneficial results. Side effects, unfortunate appearances, and the occasional medical mystery are entirely normal.

01. A Face for Radio

Your vocal cords have developed an extraordinary range. You can perfectly imitate any voice you have heard for at least one minute, including its accent and mannerisms. Unfortunately, this does not grant you knowledge of what that person would actually say.

02. The Human Compass

You always know which direction is north, even underground, underwater, or while unconscious. If someone spins you around while you're sleeping, you'll wake up furious and facing north.

03. A Gut Feeling

Your stomach has developed a rudimentary sense of danger. It growls loudly whenever someone nearby is deliberately lying to you. It cannot distinguish between a harmless lie and an important one, and does not tell you who is lying.

04. The Third Nostril

A fully functional nostril has appeared somewhere inconvenient on your body. It can detect radioactive substances through thin barriers, and you can reliably distinguish different sources of radiation by smell. Nobody knows why uranium smells like cinnamon.

05. The People's Elbow

Your elbows have become capable of bending in any direction without injury. You can contort your arms into remarkably small spaces, reach awkward mechanisms, and escape ordinary restraints. Your handshake is profoundly unsettling.

06. Unreasonable Charisma

Small domesticated animals find you irresistibly charming. Cats, dogs, chickens, and similar creatures will generally approach you peacefully and may follow simple instructions. This does not extend to humans, despite your insistence otherwise.

07. The Human Tape Recorder

You can perfectly recall and reproduce any sound you have heard within the past seven days. Conversations, passwords spoken aloud, melodies, and mechanical noises are all fair game. Your memory for visual information remains completely ordinary.

08. Photosynthesis, Sort Of

Your skin can extract a modest amount of nourishment from sunlight. A full day outdoors provides enough energy to replace one ordinary meal. You also become slightly greener after prolonged exposure, which is apparently unrelated.

09. The World's Greatest Poker Face

Your facial muscles have become entirely voluntary. You can suppress all involuntary facial expressions and convincingly imitate nearly any emotion. Your face does not betray fear, pain, surprise, or deception unless you want it to.

10. Pocket Dimension?

A small cavity has developed beneath the skin of your abdomen. It can safely store an object about the size of a grapefruit without discomfort. Objects stored

inside do not decay any faster than normal. Please do not put anything sharp in there.

11. The Living Antenna

Your nervous system can receive ordinary radio transmissions without equipment. You can mentally tune to different frequencies, provided the signal is strong enough. You cannot transmit, but you can listen without anyone knowing.

12. A Very Thick Skull

Your skull has become extraordinarily dense. You are highly resistant to head injuries and can safely headbutt fragile barriers. Unfortunately, your head is noticeably heavier, which makes sleeping on cheap pillows difficult.

13. The Gift of Gab

You can understand the emotional intent of speech in any human language, even one you have never heard. You cannot understand the actual words, but can distinguish threats, affection, sarcasm, fear, and sincerity with remarkable accuracy.

14. The Backup Set

Whenever you lose a tooth, a new one grows in within twenty-four hours. Your teeth can also gradually replace damaged fillings and repair minor fractures. Dentists hate this one simple trick.

15. The Long Arm of the Law

Your arms can stretch to approximately twice their normal length without injury. They retain their usual strength and dexterity, allowing you to retrieve distant objects, reach through gaps, or deliver a truly spectacular handshake.

16. Unnatural Luck

Once per session, when a purely coincidental event could plausibly help you, you may ask the GM whether that coincidence happens. The GM decides its exact form. Lost keys, convenient strangers, and improbable timing are fair game; miracles are not.

17. The Universal Blood Donor

Your blood is biologically compatible with every human blood type and can temporarily stabilize many common illnesses when used in a transfusion. Your body replenishes donated blood unusually quickly. Medical professionals will be very interested in you.

18. The Human Lie Detector

You can hear subtle changes in another person's heartbeat when standing close to them. This allows you to recognize fear, excitement, and unusual stress, but not necessarily dishonesty. You are also exceptionally good at finding people hiding behind thin walls.

19. The Second Brain

A small auxiliary brain has developed somewhere inside your torso. You can consciously focus on two unrelated mental tasks at once, such as reading while maintaining a conversation, or monitoring two separate information feeds. Both tasks receive your full attention.

20. The Last Laugh

Your body has developed an extraordinary capacity for surviving otherwise fatal injuries. Once per session, when you would die from an injury that leaves recoverable remains, you instead survive in a critically wounded state. This does not prevent other consequences of the injury.

21. The Human Shovel

Your fingernails have hardened into extraordinarily durable digging implements. You can excavate ordinary soil almost as quickly as someone using a shovel, and

can scrape through soft stone given enough time. Your hands remain perfectly capable of delicate work.

22. Familiar Faces

Your brain has become exceptionally good at recognizing faces. You never forget a face you have clearly seen, even decades later or after significant changes in appearance. Disguises that rely only on clothing or hairstyles are ineffective against you.

23. The Perfect Palate

Your tongue can identify individual ingredients in anything you taste, including trace quantities of drugs, poisons, and contaminants. You cannot identify substances you have never encountered, but can remember and recognize their flavors indefinitely.

24. Sticky Fingers

Your fingertips produce a harmless adhesive secretion. You can cling to walls and ceilings capable of supporting your weight, climb smooth surfaces, and hold small objects without gripping them. The secretion leaves no visible residue.

25. The Human Thermos

Your digestive system can store consumed liquids at their original temperature for up to twelve hours. You can voluntarily regurgitate them without discomfort or contamination. You can carry approximately two liters this way. An absolutely disgusting way to serve coffee.

26. The Skeleton Key

Your fingertips contain unusually sensitive nerves capable of detecting the internal movement of mechanical locks. When using improvised lockpicking tools, you can feel the positions of pins and tumblers as though you were looking directly at them.

27. The Nose Knows

Your sense of smell has become sophisticated enough to recognize individual humans by scent. You can follow a fresh scent trail under reasonable conditions and recognize someone even when their appearance or voice has changed.

28. The Human Bubble Level

Your inner ear has developed a perfect sense of orientation. You always know whether a surface is level, can accurately estimate slopes, and rarely lose your balance. Ordinary dizziness and motion sickness no longer affect you.

29. Bone China

Your bones have become remarkably flexible without sacrificing strength. You can squeeze through openings barely wider than your skull, provided your internal organs can fit. Your body returns to its original shape afterward.

30. The Walking Library

Your brain perfectly retains anything you have read, although you cannot necessarily understand it. You can reproduce written passages from memory, including diagrams and unfamiliar symbols. You still have to actually read the material first.

31. Rainmaker

Your sweat glands have developed the ability to extract moisture directly from humid air. In sufficiently humid environments, you can collect a small but useful quantity of clean drinking water from your skin over several hours.

32. The Human Photocopier

Your skin can temporarily reproduce patterns placed against it. Pressing your hand against writing, fingerprints, or a textured surface creates a detailed impression that remains visible for approximately one

hour. Particularly useful for copying keys, documents, and embarrassing tattoos.

33. Cold-Blooded Capitalist

Your body can enter a low-energy state in which your metabolism slows dramatically. While resting, you require very little food, water, or oxygen and can survive extreme cold far better than ordinary humans. You remain conscious but move very slowly.

34. The World's Smallest Orchestra

Your vocal anatomy can produce several independent tones simultaneously. You can imitate simple musical instruments, generate convincing mechanical noises, and perform harmonies entirely by yourself. This is technically impressive and extremely annoying.

35. Four Eyes Are Better Than Two

A second pair of eyes has developed beneath your original pair. These eyes can independently focus on nearby objects, allowing you to examine tiny details while maintaining normal vision. You can also read two separate pages simultaneously.

36. The Human Seismograph

Your feet can detect subtle vibrations traveling through solid ground. You can sense approaching vehicles, large creatures, and nearby digging activity before they become audible. Soft ground and thick footwear reduce the effect.

37. A Heart of Gold

Your body has developed an extraordinary resistance to common poisons, recreational drugs, and chemical contaminants. Most substances that would intoxicate or poison an ordinary human have little effect on you. This also makes getting drunk rather difficult.

38. The Human Inkjet

Specialized glands beneath your fingernails produce a dark, permanent pigment. You can write or draw directly with your fingertips on most surfaces. The pigment is waterproof once dry and can be produced in several colors.

39. The Whispering Ear

Your ears can independently rotate and focus on specific directions. You can isolate quiet conversations from background noise, detect subtle mechanical sounds, and determine the direction of a noise with remarkable accuracy.

40. The Great Escape

Your joints can voluntarily dislocate and relocate without injury. You can escape ordinary handcuffs, ropes, and similarly restrictive bindings, provided there is enough room to maneuver. The process looks considerably more painful than it is.

41. The Human Calendar

Your body maintains a perfect awareness of elapsed time. You always know the date, approximate local time, and how long you have been awake. You can also wake yourself at a predetermined time without an alarm.

42. The Glow Worm

Your skin can emit a soft, controllable bioluminescent glow in several colors. The light is sufficient to illuminate a small room, and you can extinguish it completely. You have become the world's least convenient flashlight.

43. The Great Communicator

Your nervous system can detect the emotional state of nearby mammals through subtle chemical signals. You can recognize fear, aggression, curiosity, and affection in animals, although you cannot directly communicate with them.

## 44. The Human Can Opener

Your front teeth have become extraordinarily strong and sharp. You can bite through thin sheet metal, plastic, rope, and similar materials without damaging your teeth. Your jaw remains otherwise normal.

## 45. Nature's Umbrella

Your hair has become completely waterproof and can spread outward into a broad, rigid canopy when exposed to rain. It can keep your head and shoulders dry during ordinary rainfall. You look ridiculous, but comfortably ridiculous.

## 46. The Human Encyclopedia of Filth

Your immune system can identify and neutralize most common bacterial and fungal infections before symptoms develop. You can safely handle spoiled food, contaminated surfaces, and unsanitary environments without becoming ill from ordinary pathogens.

## 47. The Invisible Handshake

Your skin can temporarily alter its texture and coloration to match surfaces you touch. When remaining motionless against a wall, floor, or similar background, you become remarkably difficult to notice. Movement immediately disrupts the camouflage.

48. The Human Grappling Hook

Your tendons have become extraordinarily elastic. You can jump approximately three times farther than an ordinary human and safely absorb falls that would normally cause serious injury. Your legs make an unpleasant spring-like noise when you land.

49. The World's Best Babysitter

Human infants and young children instinctively find your presence calming. Crying babies often quiet when you hold them, frightened children are more willing to trust you, and ordinary childhood tantrums become easier to manage.

50. The Human Metal Detector

Your tongue can sense nearby conductive metals through a peculiar electrical sensation. You can detect concealed metallic objects within approximately two meters and roughly distinguish their size. Gold tastes like disappointment.

51. The Regifting Organ

Your body can temporarily grow a replacement for a missing minor organ or gland, provided its original function is understood by your biology. Removed

tonsils, damaged glands, and similar structures gradually regenerate over several days.

52. The Human Weather Station

Changes in atmospheric pressure produce distinct sensations in your sinuses. You can predict approaching storms, major temperature changes, and significant shifts in weather several hours before they become obvious.

53. The Perfect Pitch

Your auditory system can identify exact musical frequencies without reference. You can recognize altered recordings, detect subtle changes in machinery by sound, and determine whether two apparently identical noises differ.

54. The Human Filter

Your kidneys and liver have become extraordinarily efficient. You can safely drink moderately contaminated water that would make ordinary humans ill, although highly toxic chemicals and extreme radiation remain dangerous.

55. The Human Thermostat

Your body can maintain a comfortable internal temperature across an unusually wide range of environmental conditions. Ordinary desert heat and freezing weather cause you little discomfort, although extreme conditions can still injure you.

56. The Living Ruler

Your eyes can estimate distances, dimensions, and angles with extraordinary accuracy. You can reliably judge whether an object will fit through an opening, estimate the height of a building, or measure a room without tools.

57. The Human Printer

Your fingernails grow in thin, detachable sheets that can be peeled away without pain. By concentrating on a pattern, you can produce small embossed symbols or simple images on these sheets. They're surprisingly useful for making identification tags.

58. The Borrowed Face

Your facial muscles and soft tissues can gradually reshape themselves to resemble another human whose appearance you know well. The transformation takes approximately ten minutes and cannot substantially

change your height or body type. Your voice remains unchanged.

59. The Human Root Cellar

Your stomach contains a separate biological storage pouch capable of preserving small quantities of food for several weeks without spoilage. You can retrieve the contents voluntarily. This is extremely useful and absolutely revolting.

60. The Human Periscope

Your neck can extend up to one additional meter without injury. You can peer over walls, around obstacles, and through elevated windows. Your neck returns to its normal length whenever you relax.

61. The Walking Campfire

Your skin produces a steady, harmless warmth that can be increased slightly through concentration. You can keep nearby companions warm, dry damp clothing, and prevent small containers of water from freezing. You cannot generate enough heat to ignite materials.

62. The Human Polygraph

Your body can recognize when your own memories are being altered or manipulated. You immediately notice

contradictions introduced by drugs, hypnosis, or similar mental interference, although you may not know which memories are genuine.

63. The Universal Translator, Almost

Your tongue and ears have developed an instinctive understanding of basic human vocal patterns. After listening to an unfamiliar spoken language for several minutes, you can communicate simple concepts such as hunger, danger, directions, and trade without knowing its vocabulary.

64. The Human Velcro

Your skin can produce microscopic hooks that adhere to cloth, rope, and other fibrous materials. You can grip fabric securely without using your hands, climb suitable surfaces, and prevent objects from slipping from your grasp.

65. The Human Lighthouse

Your eyes can emit narrow beams of visible light, bright enough to illuminate objects several meters away. You can adjust their intensity and direction independently. Looking directly into a mirror is a regrettable experience.

66. The Great Listener

Your brain has developed an extraordinary ability to remember conversations. You can recall not only what someone said, but their precise tone, pauses, and emotional mannerisms. You are exceptionally difficult to misquote.

67. The Human Fire Extinguisher

Your lungs can produce a dense, non-toxic gas that displaces oxygen in a small area. You can extinguish small fires by exhaling directly onto them. The gas dissipates quickly and cannot be produced in sufficient quantities to suffocate a person.

68. The Human Lie of Omission

Your body produces no involuntary physical indicators of stress. Your pulse remains steady, your hands never tremble, and you do not sweat from nervousness. Conventional physiological lie detection is almost entirely ineffective against you.

69. The Living Map

Your brain automatically constructs a detailed mental map of places you physically explore. You can retrace complicated routes, remember intersections, and navigate familiar buildings in darkness without becoming lost.

## 70. The Human Fishing Rod

Your tongue can extend several meters and retract with considerable precision. It is strong enough to retrieve small objects, manipulate light switches, or catch insects. Speaking while your tongue is extended is understandably difficult.

## 71. The Human Smoke Detector

Your respiratory system can detect combustion products at extraordinarily low concentrations. You can identify nearby fires, distinguish burning materials by smell, and recognize when a room has recently contained smoke.

## 72. The Human Archive

Your brain can voluntarily preserve a single sensory experience in perfect detail. You can revisit the sights, sounds, smells, and physical sensations of that moment whenever you wish. You may replace the preserved memory with a new one at any time.

## 73. The Human Welding Torch

Your saliva contains a chemical that rapidly hardens when exposed to air. You can use it to seal small leaks, repair cracks, and temporarily bond lightweight materials. The substance is harmless inside your mouth and dissolves after several days.

74. The Human Plumb Bob

Your body instinctively recognizes structural stress in buildings and machinery through subtle vibrations. You can identify dangerously weakened supports, unstable floors, and components approaching mechanical failure through physical contact.

75. The Human Compass Rose

Your eyes can perceive polarized light and subtle magnetic-field effects. You can navigate using the sky even under heavy cloud cover and recognize disturbances caused by large electrical installations.

76. The Human Bloodhound

Your sense of smell can detect trace chemical signatures left by human emotions. You can recognize whether a location recently contained someone experiencing intense fear, anger, or excitement, provided the trail is reasonably fresh.

77. The Living Bandage

Your skin produces a sterile, adhesive film over minor wounds. Cuts and abrasions seal almost immediately, preventing ordinary bleeding and infection. More serious injuries still require medical attention.

## 78. The Human Chameleon

Your hair can change color at will across the visible spectrum. You can produce elaborate patterns, imitate natural hair colors, or make your head look like a particularly unfortunate tropical bird.

## 79. The Human Vacuum Cleaner

Your lungs can generate unusually powerful suction without injury. You can inhale small lightweight objects from several feet away and expel them safely. You cannot inhale objects larger than your airway.

## 80. The Human Safe

Your body can temporarily harden the skin over a chosen area into a tough, leathery shell. The effect provides substantial protection against ordinary cuts, scrapes, and blunt impacts. The hardened skin remains flexible enough for normal movement.

## 81. The Human Calculator

Your brain can perform arithmetic calculations with extraordinary speed and accuracy. You can mentally handle complicated financial transactions, estimate probabilities, and detect numerical inconsistencies. This does not make you better at abstract reasoning.

## 82. The Human Barometer

Your body can detect extremely small changes in ambient radiation. You can distinguish ordinary background radiation from dangerous exposure and sense whether a radioactive source is approaching or receding.

## 83. The Human Locksmith

Your fingernails can temporarily reshape into simple rigid tools, including picks, wedges, screwdrivers, and narrow probes. They are durable enough for delicate mechanical work but cannot replace heavy equipment.

## 84. The Human Mirror

Your skin can become highly reflective, resembling polished silver. You can reflect light into dark spaces, signal distant observers, and confuse optical devices that rely on ordinary surface reflections. You remain otherwise completely visible.

## 85. The Human Icebox

Your body can safely lower the temperature of objects held against your skin. You can preserve small quantities of perishable food, cool drinks, and reduce swelling from minor injuries. You cannot freeze large objects or produce extreme cold.

86. The Human Spiderweb

Your fingertips can produce thin strands of extraordinarily strong biological fiber. The strands can be woven into rope, nets, or temporary bindings. Producing large quantities requires substantial food and time.

87. The Human Earthquake Detector

Your bones resonate faintly in response to distant seismic activity. You can detect earthquakes, underground explosions, and major structural collapses before their effects reach your location.

88. The Human Mirrorball

Your eyes can independently rotate through a full circle within their sockets. You can inspect nearly every direction without moving your head. Your eyelids still function normally, although spectators tend to wish they didn't.

89. The Human Locksmith's Nightmare

Your skin can temporarily become as slippery as lubricated glass. You can escape ordinary grapples, slide through narrow passages, and prevent adhesives from sticking to you. Clothing is unaffected.

## 90. The Human Orchestra Conductor

Your nervous system can perceive subtle rhythmic patterns in machinery and biological movement. You can synchronize your actions with moving mechanisms, recognize irregular heartbeats, and detect when a machine is operating outside its normal rhythm.

## 91. The Human Seed Bank

Your digestive system can preserve swallowed seeds without damaging them. You can store seeds internally for months and retrieve them intact. Seeds exposed to your digestive fluids often germinate unusually quickly afterward.

## 92. The Human Weatherproofing

Your skin produces a thin protective coating that resists ordinary acids, alkalis, and corrosive environmental contaminants. You can safely handle many substances that would irritate or burn normal skin, although industrial-strength chemicals remain dangerous.

## 93. The Human Searchlight

Your pupils can expand far beyond ordinary human limits. You can see clearly in extremely dim light,

including moonless nights and poorly illuminated interiors. Complete darkness remains complete darkness.

94. The Human Locksmith's Friend

Your fingertips can detect residual heat patterns left on surfaces. You can determine which buttons were recently pressed, which objects were recently handled, and whether machinery was operating within the past several minutes.

95. The Human Orchestra Pit

Your chest cavity contains a harmless resonating chamber capable of amplifying your voice. You can project speech across large distances without shouting and produce remarkably convincing echoes.

96. The Human Time Capsule

Your body can temporarily suspend the decay of a small organic object held beneath your skin. A flower, biological sample, or piece of food can remain fresh for weeks. The object must fit comfortably beneath a fold of skin.

97. The Human Lightning Rod

Your nervous system can safely conduct and disperse moderate electrical currents. Ordinary electrical

shocks cause little harm, and you can sometimes complete simple electrical circuits by touching exposed contacts. Extremely high voltages remain dangerous.

98. The Human Truth Serum

Your body produces a faint chemical signal that encourages nearby people to relax and speak more openly. It does not compel honesty or override conscious decisions, but ordinary strangers often find themselves unusually comfortable confiding in you.

99. The Human Miracle Worker

Your blood contains extraordinary regenerative compounds. When applied to a fresh wound, it dramatically accelerates natural healing and can prevent otherwise serious tissue damage. It cannot restore missing limbs or reverse death, and producing large quantities weakens you.

100. The Ultimate Adaptation

Your body has developed a remarkable ability to survive environmental extremes. You can endure brief exposure to conditions that would ordinarily kill a human, including severe cold, intense heat, low oxygen, and moderate radiation. You are not invulnerable, but your body is astonishingly reluctant to give up.

Well, there you have it! One hundred reasons to be thankful for the radioactive miracle coursing through your veins. Of course, not every mutation is quite so pleasant. Turn the page, dear reader, and prepare yourself for some truly unfortunate medical developments…

## THE BAD NEWS...

Now, wastelander, I must confess that not every mutation is a blessing. Sometimes the human body makes mistakes. Sometimes those mistakes are embarrassing. And sometimes those mistakes are so catastrophic that the only reasonable response is to find a doctor, a priest, and perhaps a very large bottle of whiskey.

The following mutations have been documented to produce generally undesirable results. If you recognize any of these symptoms, remain calm. Panic rarely helps, and in several documented cases has actually made things much worse.

01. The Honesty Gland

A new gland in your throat releases a pungent chemical whenever you knowingly tell a lie. The smell is unmistakable, extraordinarily unpleasant, and persists

for several minutes. Technically, you can still lie. Practically, good luck.

02. Loose Lips

Your mouth occasionally repeats the last sentence you heard, in the original speaker's voice. This occurs at the GM's discretion, especially during moments when silence would be preferable. You have no conscious control over the repetition.

03. The Human Thermometer

Your body temperature fluctuates dramatically with your emotions. Anger makes you uncomfortably hot, fear makes you cold, and embarrassment can produce visible steam. The effect is harmless to you but difficult to conceal.

04. The Squeaky Wheel

One of your joints produces a loud rubber-duck squeak whenever you move it. The joint works perfectly well, but the sound makes stealth considerably more difficult. Lubricants do not help. Actual rubber ducks become strangely quiet around you.

05. The Sweet Tooth

Your saliva has become extremely sugary. Insects are attracted to you, and any food you lick becomes

noticeably sweeter. You also experience an insatiable craving for sugar, and ordinary food tastes increasingly bland.

06. An Eye for an Eye

You have developed a second pair of fully functional eyes on the back of your head. You can see in both directions simultaneously. Unfortunately, your brain cannot selectively ignore either view, making crowded spaces disorienting and sleep difficult without covering both pairs.

07. Glowboy

Your skin emits a faint green glow that becomes brighter when you are frightened. The light is sufficient to read by in total darkness. Unfortunately, it makes hiding nearly impossible whenever you are scared, which is generally when you most want to hide.

08. The Bottomless Pit

Your stomach can digest almost any organic material without illness, including rotten food and many common toxins. Unfortunately, your metabolism is so aggressive that you require approximately four times the normal amount of food to remain healthy.

09. Unfortunate Magnetism

Your body generates a weak but persistent magnetic field. Small metal objects occasionally stick to your skin, compasses become unreliable near you, and delicate electronics may malfunction after prolonged contact. You are particularly unpopular with mechanics.

10. The Human Alarm Clock

Your body has developed a flawless internal clock. You always know the precise time, even without sunlight or a working watch. Unfortunately, every morning at exactly 6:00 AM, you involuntarily scream at the top of your lungs for three seconds.

11. The Unblinking

Your eyes no longer require blinking and are immune to ordinary dust and dryness. Unfortunately, you cannot close them voluntarily. You must cover your eyes to sleep, and people find prolonged conversations with you deeply uncomfortable.

12. The Wrong Voice

Your vocal cords occasionally switch between wildly different pitches and accents without warning. This does not affect your ability to speak, but it can make impersonation, public speaking, and delicate negotiations exceptionally difficult.

13. The Human Weather Vane

Your hair grows rapidly and always points in the direction of the prevailing wind. Indoors, it points toward the nearest draft. Cutting it only works for a few hours before it regrows. Your barber has stopped returning your calls.

14. A Taste for Metal

You experience an overwhelming urge to lick exposed metal surfaces. Doing so provides a brief sense of satisfaction. Resisting the urge for long periods makes you irritable and distracted. Rust tastes particularly good, for reasons best left unexplored.

15. The Echo Chamber

Your internal organs have developed an unusual resonance. Every time you speak, a faint echo of your own voice follows approximately two seconds later. It is audible to anyone nearby and cannot be suppressed. Whispering helps, but not much.

16. The World's Worst Poker Face

Your facial muscles involuntarily exaggerate whatever emotion you are feeling. Fear produces a cartoonish expression of terror, suspicion makes you squint

dramatically, and attraction causes an unmistakably stupid grin. You cannot suppress these expressions.

17. The Human Geiger Counter

Your teeth chatter in the presence of radiation, increasing in intensity as radiation levels rise. This makes you an excellent radiation detector. Unfortunately, prolonged exposure causes the chattering to become painfully loud, and you cannot stop it.

18. The Reverse Midas Touch

Your sweat is mildly corrosive to common metals. Prolonged contact can damage tools, weapons, door handles, and other equipment. Your own skin is unaffected. Gloves help, until you sweat through them.

19. The Second Opinion

A small, partially formed mouth has developed somewhere on your body. It occasionally offers unsolicited opinions about your decisions, usually in a voice resembling your own. It knows nothing you do not know, but is extraordinarily confident nonetheless.

20. The Immortal Itch

Your skin regenerates minor cuts and abrasions almost instantly. Unfortunately, the regeneration produces a

persistent, maddening itch that intensifies whenever you are stressed. Scratching provides temporary relief but never eliminates the sensation.

21. Snorty McSnortface

Your nasal passages have developed a peculiar resonance. Whenever you breathe through your nose, you produce a faint musical hum. The pitch changes with your breathing. Holding your breath stops it, but ordinary stealth becomes considerably more difficult.

22. The Reverse Handshake

Your palms have developed an involuntary gripping reflex. Whenever you shake someone's hand, your fingers tighten and refuse to release for several uncomfortable seconds. The effect is harmless but makes formal introductions extraordinarily awkward.

23. The Human Popcorn Machine

Small pockets of gas occasionally form beneath your skin and burst with audible popping noises. The effect is painless but unpredictable. Loud pops are particularly common when you are nervous or trying to remain quiet.

24. The Unfortunate Growth Spurt

Your fingernails and toenails grow at approximately twenty times the normal rate. Without regular trimming, they become long, curled, and difficult to manage. Cutting them is painless, but maintaining them is practically a full-time occupation.

25. The Internal Canteen

Your skin becomes slightly transparent whenever it rains. Veins, tendons, and superficial muscles become clearly visible until you dry off. The effect is harmless but makes you look like a walking anatomy textbook.

26. They call me the Sandwich

Your sweat produces a powerful floral fragrance that cannot be masked by ordinary soap or perfume. The scent is pleasant at first but becomes overwhelming in enclosed spaces. Tracking animals and attentive humans can follow it easily.

27. The Human Accordion

Your rib cage has become unusually flexible and occasionally expands or contracts involuntarily. This produces loud wheezing noises and makes your torso appear to inflate like a balloon. Breathing remains normal, but fitted clothing rarely survives long.

28. The Reverse Chameleon

Your skin changes color to contrast sharply with whatever surface you are standing against. Against dark backgrounds, you become bright white; against pale backgrounds, you turn nearly black. You are exceptionally easy to spot.

29. The Human Static Generator

Your hair and skin constantly accumulate static electricity. Small sparks jump from your fingers whenever you touch metal, and your hair stands on end in dry weather. Delicate electronics are particularly vulnerable to your presence.

30. The Unfortunate Echo

Your voice occasionally emerges from your mouth several seconds after you intend to speak. You remain fully aware of what you are trying to say, but conversations become frustratingly delayed. The effect is particularly troublesome when timing matters.

31. Goo Boy

Your feet secrete a thin, slippery mucus whenever you walk barefoot. The substance is harmless but leaves a visible trail that persists for several hours. Shoes contain most of it, although they become unpleasantly damp.

## 32. The Wrong Temperature

Your skin feels freezing cold to anyone who touches you, regardless of your actual body temperature. This has no effect on your health but makes physical affection, medical examinations, and reassuring handshakes deeply unsettling.

## 33. The Human Metronome

Your heartbeat produces an audible ticking sound that can be heard in quiet rooms. The rhythm is perfectly regular and continues even while you sleep. It becomes louder during physical exertion, making stealth and relaxation difficult.

## 34. The World's Worst Haircut

Your hair grows in completely random directions and cannot be permanently styled. Cutting it causes the remaining hair to rearrange itself within minutes. Hats help, but your hair gradually pushes them off your head.

## 35. The Human Soap Bubble

Your saliva produces large quantities of harmless bubbles whenever you speak for extended periods. The bubbles float away and burst normally, but they make serious speeches and delicate negotiations extraordinarily difficult.

36. The Unfortunate Reflection

Your reflection in mirrors appears approximately five seconds behind your actual movements. The effect does not alter your body or perception, but anyone watching you in a mirror will notice the delay. You have become deeply unpopular with superstitious wastelanders.

37. The Human Mosquito Magnet

Your blood produces an irresistible chemical signal to biting insects. Mosquitoes, fleas, and similar parasites preferentially target you whenever you are nearby. Ordinary repellents are significantly less effective.

38. The Wrong Foot Forward

Your feet have gradually rotated so that your toes point backward. You can still walk normally, but your footprints appear to travel in the opposite direction. Finding properly fitting shoes is nearly impossible.

39. The Human Sneeze Cannon

Your sneezes have become extraordinarily powerful. A single sneeze can scatter loose papers, extinguish candles, or knock small objects from tables. Unfortunately, you sneeze whenever exposed to bright sunlight.

40. The Unfortunate Appetite

Your sense of taste has become inverted. Foods that ordinary humans find delicious taste revolting, while spoiled or unpleasant foods taste wonderful. You can still eat normally, but sharing meals with others becomes a miserable experience.

41. The Human Candle

Your body produces a faint smell of burning wax, and your fingertips occasionally emit tiny harmless flames when you become excited. The flames cannot be controlled and may ignite extremely flammable materials. You are forbidden from entering several reputable establishments.

42. The Wrong Shadow

Your shadow occasionally moves independently of your body, adopting poses or gestures that do not match your actions. It cannot interact with physical objects, but it can reveal your location and cause considerable alarm among observers.

43. The Human Whistle

Your respiratory system produces a high-pitched whistle whenever you exhale forcefully. The sound is audible from a considerable distance and cannot be suppressed.

Running, climbing, and other strenuous activities become remarkably conspicuous.

44. The Unfortunate Memory

Your brain has developed an extraordinary ability to remember embarrassing experiences. You can recall every humiliating moment of your life in perfect detail, including sensations and emotions. Unfortunately, these memories occasionally replay involuntarily during stressful situations.

45. The Human Glowstick

Your bodily fluids emit a bright fluorescent glow under ultraviolet light. Blood, sweat, saliva, and tears are all affected. The effect is harmless but makes forensic investigation of your activities remarkably easy.

46. The Reverse Midas Touch, Again

Your skin causes ordinary paper to become brittle and yellow after prolonged contact. Books, maps, documents, and paper currency gradually deteriorate when handled directly. Gloves prevent the effect, provided they remain intact.

47. The Human Bubble Wrap

Small, fluid-filled blisters develop across your skin whenever you become frightened. They are painless and disappear after several hours, but they burst with loud popping noises when touched. The effect is especially embarrassing during tense negotiations.

48. The Unfortunate Accent

Your speech involuntarily adopts the accent of the last person you spoke with. The effect persists until you have another conversation. You retain your vocabulary and language, but your constantly changing accent makes you sound like a terrible impersonator.

49. The Human Refrigerator

Your breath is permanently cold enough to produce visible condensation, even in warm weather. You can slightly chill small objects by breathing on them, but your mouth and throat feel perpetually cold. Hot drinks provide only temporary relief.

50. The Wrong Way Around

Your internal sense of left and right has become reversed. You instinctively reach left when intending to reach right and vice versa. You can compensate through conscious effort, but sudden instructions and reflexive actions are frequently confused.

51. The Human Confetti Cannon

Your skin periodically sheds tiny, brightly colored flakes that resemble confetti. The flakes are harmless but accumulate rapidly in clothing, bedding, and enclosed spaces. You leave a faint trail wherever you go.

52. The Unfortunate Honk

Your nose produces a loud honking noise whenever you experience surprise. The sound is involuntary and cannot be suppressed. Sudden scares, unexpected compliments, and startling revelations become particularly humiliating.

53. The Human Paperweight

Your body has become unusually dense, approximately doubling your weight without changing your appearance. You retain your normal strength and mobility, but weak floors, fragile furniture, and small boats become serious concerns.

54. The Reverse Thermostat

Your body becomes uncomfortable whenever the surrounding temperature is perfectly pleasant. You feel cold in mild weather and overheated in comfortable

rooms, but experience ordinary comfort in moderately hot or cold environments.

55. The Human Wind Chime

Your bones produce faint musical tones whenever you move. The sounds are pleasant but impossible to suppress, and become louder during rapid movement. You are effectively accompanied by a tiny invisible orchestra.

56. The Unfortunate Smile

Your facial muscles have permanently contracted into an enormous grin. You can still speak and eat normally, but your expression never changes. Delivering bad news, attending funerals, and expressing sincere concern become difficult.

57. The Human Dust Magnet

Your skin attracts airborne dust and dirt at an extraordinary rate. Even clean environments leave you visibly filthy within hours. Bathing removes the accumulated grime, but the effect resumes immediately afterward.

58. The Wrong Flavor

Everything you eat tastes faintly of gasoline. The flavor does not indicate actual contamination and has no physical effect, but it makes meals unpleasant and can conceal the taste of genuinely dangerous substances.

59. The Human Echo Locator

Your ears can detect distant sounds with remarkable sensitivity, but your brain involuntarily repeats those sounds internally for several minutes afterward. Crowded environments become overwhelming, and loud noises can leave you distracted long after they stop.

60. The Unfortunate Tail

A long, muscular tail has developed at the base of your spine. It provides modest assistance with balance and can grasp lightweight objects. Unfortunately, it moves involuntarily whenever you experience strong emotions, making deception and concealment difficult.

61. The Human Ice Cube

Your skin becomes extremely slippery whenever it gets wet. Rain, sweat, and spilled liquids make it difficult to grip objects or maintain footing. You are particularly dangerous to yourself in bathrooms.

62. The Wrong Reflection, Again

Your reflection appears to be wearing clothing different from what you are actually wearing. The reflected clothing changes unpredictably and occasionally resembles outfits you have never owned. The effect is harmless but deeply unsettling.

63. The Human Fire Alarm

Your body produces a loud, involuntary shriek whenever you smell smoke. The reaction occurs even around harmless campfires, cooking fires, and tobacco smoke. You cannot distinguish dangerous fires from ordinary ones through this reflex.

64. The Unfortunate Teeth

Your teeth have become slightly translucent and emit a faint clicking noise whenever you speak. The effect does not weaken them, but the sound makes quiet conversation difficult and gives your smile an unsettling appearance.

65. The Human Puddle

Your body periodically releases a large quantity of harmless water through your skin. The event occurs without warning and leaves you, your clothing, and nearby surfaces thoroughly soaked. You cannot control when it happens.

66. The Wrong Direction

Your body instinctively turns toward the nearest source of strong radiation whenever you are not consciously controlling your movement. You can resist the urge easily, but while distracted or asleep you may gradually orient yourself toward dangerous areas.

67. The Human Bell

Your skull produces a faint ringing noise whenever struck or tapped. The sound is audible to nearby people and can persist for several minutes. Head injuries are no more dangerous than normal, but even minor bumps become embarrassing.

68. The Unfortunate Growth

A small, harmless horn has developed on your forehead. It grows continuously and must be trimmed regularly. If neglected, it eventually becomes long enough to interfere with hats, helmets, and ordinary doorways.

69. The Human Perfume Disaster

Your body emits a different strong odor every morning. The scent may resemble flowers, gasoline, spoiled food, wet dogs, or any number of other substances. You have no control over the selection, and the smell persists throughout the day.

70. The Wrong Color

Your skin has permanently changed to a vivid, unnatural color. The exact shade is determined by the GM or player, but it is impossible to conceal without clothing or cosmetics. Ordinary people frequently assume you are dangerously radioactive.

71. The Human Doorbell

Your body produces a cheerful chiming sound whenever you enter a new enclosed space. The sound is involuntary and audible to everyone nearby. Entering buildings quietly becomes extraordinarily difficult.

72. The Unfortunate Fingertips

Your fingerprints constantly rearrange themselves into new patterns. This makes conventional fingerprint identification unreliable, but also causes your fingertips to feel slightly numb and reduces your ability to manipulate extremely delicate objects.

73. The Human Lightning Bug

Tiny sparks of harmless light occasionally appear around your body when you experience strong emotions. The sparks are visually striking but difficult to conceal. Fear, anger, and excitement make you look like a malfunctioning electrical appliance.

74. The Wrong Voice, Again

Your voice sounds approximately one octave higher whenever you speak to someone you find intimidating. The effect is involuntary and becomes more pronounced as your fear increases. Attempts to sound threatening become increasingly pathetic.

75. The Human Cactus

Small, sharp spines have developed across your forearms and shoulders. They provide modest protection against grappling and close contact, but make ordinary clothing uncomfortable and physical affection hazardous.

76. The Unfortunate Breath

Your breath contains a harmless chemical that causes nearby plants to wilt temporarily. Flowers droop, leaves curl, and delicate vegetation becomes visibly distressed when you speak directly toward it. The plants recover after several hours.

77. The Human Alarm System

Your body produces a loud clicking noise whenever you become suspicious of someone. The sound is involuntary and increases in frequency with your level of distrust. Unfortunately, it often alerts the very people you are suspicious of.

78. The Wrong Sleep Schedule

Your biological clock has become permanently inverted. You feel most alert at night and become increasingly sleepy during daylight hours. You can still function during the day, but prolonged daytime activity is exhausting.

79. The Human Velcro Disaster

Your skin produces microscopic hooks that cause clothing, bedding, and soft furnishings to cling to you. Removing attached fabrics requires considerable effort and occasionally damages them. Smooth metal and plastic surfaces are unaffected.

80. The Unfortunate Voice of Reason

A second, independent vocal organ has developed in your throat. It occasionally interrupts your speech to offer unsolicited commentary, usually criticizing your decisions. It cannot reveal information you do not know, but it is remarkably persuasive.

81. The Human Candlewick

Your hair absorbs oils and other flammable liquids at an extraordinary rate. It becomes dangerously combustible when exposed to such substances. Ordinary washing removes the absorbed material, but even small spills require immediate attention.

## 82. The Wrong Temperature, Again

Your hands are permanently hot enough to make prolonged contact uncomfortable. You can warm small objects by holding them, but delicate materials, cold drinks, and physical affection become difficult to manage.

## 83. The Human Mirror Maze

Your eyes occasionally perceive reflections where none exist. Shiny surfaces appear to contain additional rooms, doors, or people that are not actually present. The illusions are harmless but can make navigation through reflective environments confusing.

## 84. The Unfortunate Hunger

Your body requires a small quantity of ordinary dirt or sand each day to maintain normal digestion. Without it, you experience severe stomach discomfort. The material provides no nutritional benefit and tastes exactly as unpleasant as expected.

## 85. The Human Trumpet

Your nose can involuntarily produce a loud trumpet-like blast whenever you laugh. The sound is startling, difficult to suppress, and can be heard from a considerable distance. Jokes have become a genuine tactical liability.

86. The Wrong Shadow, Again

Your shadow appears to belong to a different person, often someone taller, shorter, or differently shaped than you. The effect changes unpredictably every few days. It does not affect your body, but makes observers deeply suspicious.

87. The Human Water Balloon

Your skin retains unusually large quantities of water after drinking. You become visibly bloated until the excess water is gradually released through perspiration. Drinking large amounts quickly can make movement uncomfortable.

88. The Unfortunate Whiskers

Long, sensitive whiskers have developed around your mouth and cheeks. They can detect nearby movement and airflow, but are extremely sensitive to touch. Crowded spaces, strong winds, and ordinary grooming become irritating.

89. The Human Reverse Compass

Your body instinctively points toward the nearest large concentration of ferrous metal. You can resist the urge, but when distracted you gradually turn toward

vehicles, machinery, or metal structures. You are particularly troublesome near scrap yards.

90. The Wrong Face

Your facial features gradually rearrange themselves while you sleep. The changes are subtle but noticeable, and over several weeks you may become difficult for acquaintances to recognize. Your voice, memories, and identity remain unchanged.

91. The Human Firefly Swarm

Your skin periodically releases tiny glowing particles that float around you for several minutes before fading. The particles are harmless but reveal your location in darkness and attract curious insects.

92. The Unfortunate Skeleton

Your bones have developed a faintly visible glow that can be seen through your skin in darkness. The effect is harmless but gives you the appearance of a walking X-ray image. Concealing yourself in dark environments becomes difficult.

93. The Human Weather Disaster

Your body becomes unusually sensitive to atmospheric pressure changes. Approaching storms cause headaches,

joint pain, and irritability. You can often predict bad weather, but only because you begin feeling miserable several hours beforehand.

94. The Wrong Appetite, Again

Your digestive system has developed an overwhelming preference for extremely spicy food. Ordinary meals provide little satisfaction, and you experience persistent cravings for increasingly intense flavors. Your tolerance for spice does not improve.

95. The Human Radio Interference

Your nervous system emits weak electromagnetic disturbances that interfere with nearby radio equipment. Signals become distorted within several meters of you, and sensitive receivers may produce loud static. You cannot control the effect.

96. The Unfortunate Echo of Death

Your body occasionally produces faint sounds resembling your own voice calling for help, even when you are silent. The sounds seem to originate from nearby rooms or behind walls. They are harmless but can cause considerable distress to companions.

97. The Human Gravity Problem

Your body has developed an unusual sensitivity to changes in elevation. Rapid ascents or descents cause severe dizziness and nausea, even when ordinary humans would feel nothing. Stairs are manageable, but elevators and steep mountain roads are unpleasant.

98. The Wrong Kind of Luck

You experience an extraordinary number of minor coincidences that inconvenience you without causing serious harm. Doors close just before you reach them, objects roll under furniture, and strangers frequently mistake you for someone else. The GM may introduce harmless complications whenever appropriate.

99. The Human Biological Hazard

Your body produces a faint chemical secretion that causes nearby organic materials to decay unusually quickly. Food spoils, flowers wilt, and untreated wood deteriorates after prolonged contact. The effect is slow but persistent, and makes long-term storage of supplies difficult.

100. The Ultimate Misfortune

Your body has developed a catastrophic tendency to react unpredictably to stress. Whenever you experience extreme fear, pain, or emotional distress, one of your

existing mutations temporarily becomes dramatically more pronounced. The GM determines which mutation is affected and how its effect intensifies. The result should be inconvenient, dangerous, or spectacularly embarrassing, but not automatically fatal.

Well, dear reader, I hope this list has provided some comfort. If you've discovered that your body is doing something truly horrifying, remember that you're not alone! Thousands of wastelanders are experiencing similar difficulties, and many of them have survived long enough to complain about it.

If your mutation is not listed here, please contact your nearest Radioman. We are always eager to expand our medical knowledge, particularly when someone else is doing the suffering.
